Statement Why Environmental Assessment Is Not Required

The proposed construction does not require any action covered by Section 1.1307 of the Commission's Rules.

As further evidence that the antenna construction complies with "ANSI" standards regarding human exposure to non-ionizing radiation, the following is shown:

POWER DENSITY CALCULATION FOR

MARION, VIRGINIA

BASED ON "WORST CASE" VALUES FROM OST #65

The antenna center of radiation ("C/R") is 91 meters above ground level. A point that is 91 meters (300 feet) from the C/R of a 1,000 Watt array at a vertical radiation angle of 90 degrees is $8.069009\text{E-}03$ milliwatts per centimeter squared. The maximum allowable ANSI/FCC limit is $1.0 \text{ mW/cm squared}$. The expected power density at 91 meters will be 0.8069009 percent of the maximum allowable under the restrictions mandated by ANSI C95.

The facility will be shut down when equipment maintenance would require workers to be exposed to levels of non-ionizing radiation in excess of $1.0 \text{ mW/cm squared}$. This would occur at a distance of less than 8 meters from the antenna radiation center, such as when workers must climb the tower in excess of 83 meters above ground level.
